

Input layer

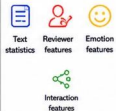

1. Plain text

2. Clause segmentation (Clause splitting)

3. Metadata / Statistic / Emotion features

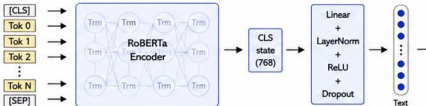

4. Random Forest (metadata expert)

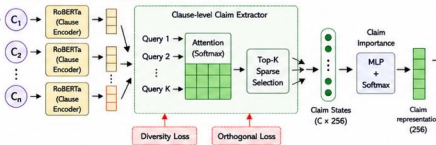

Feature extraction layer (Our model)

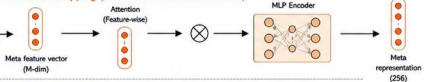

1. Text representation (RoBERTa)

2. Claim / Sentiment mining (Clause-level claims)

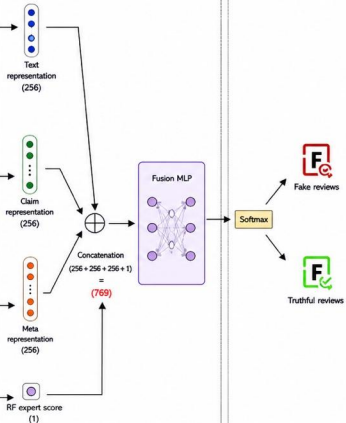

3. Feature mapping (Metadata / Statistic / Emotion)

4. Random Forest expert score (metadata)

Feature fusion layer

Output layer

RoBERTa-based text representation (Global semantic understanding)

Clause-level claim extraction (Local sentiment / claim mining)

Metadata & statistic & emotion feature mapping (Attention + MLP)

Random Forest expert (metadata) (Handcrafted model score)

Feature fusion & classification (MLP + Softmax)

⊗ Weighted pooling (Attention)
⊕ Concatenation
